

AOUT modules generate analog voltages (and gate signals) controlled by Midibox. Usually these are used to drive Analog Synthesizers.

The following modules are available:

[AOUT Module](#) uCApps

[AOUT_LC Module](#) (low cost AOUT Module) uCApps

[AOUT_NG Module](#) (new AOUT Module)

The SHX8 module is used to extend the number of AOUT outputs using Sample and Hold chips

[SHX8 Module](#) (expands AOUT Module < 64 CV Outputs) uCApps

(expired, S&H chips are discontinued/obsolete)
