Windows

- HowTo use hex2syx.pl [uCApps]

*nix

Drag & Drop files works on Mac OS X, on Linux you might have to type the paths (complete with TAB):

- open the terminal
- type **cd** (Space) and drag the *{mios_application}*/tools folder into the terminal window, press return
- the hex2syx.pl must be set to "executeable". You have to do this step only once: **chmod 750 hex2syx.pl** and press return
- type **./hex2syx.pl** (Space) and drag the .hex file into the terminal window, press return
- the .syx file should now be generated.
- upload the syx-file with with SysEx Librarian from Snoize (see HowTo use hex2syx.pl [uCApps])

Download

The script is included in almost any application inside the "/tools" folder. If for some reasons it's not inside the application you're working with, you will find it - for example - inside the ain64_din128_dout128_v2_0 app.

The newest version can be downloaded here: http://svnmios.midibox.org/trunk/bin/hex2syx.pl
