

Dual SSM 2044 PCB Bulk Order

This page is about Seppoman's bulk order for the [ssm2044_pcb](#).

More information and sound demos can be found [here](#) and [here](#).

Warning: This is not a suitable project for absolute beginners. The soldering isn't very difficult, but you will need either an AOUT_NG (SMT soldering required), an AOUT module (which needs to be expanded with the bipolar option) or two (!) AOUT_LC modules, or another type of CV source to control this module, in addition to the actual synth (SID/FM) you want to use it with. So a bit of soldering experience and knowledge about the MidiBox platform is definitely recommended.

The original bulk order is closed. I might start another bulk order this year if there's enough demand. You can express your interest in getting PCBs by adding yourself to the list below. **Note that I don't promise to start this bulk order at any specific time of year, so please don't send me PMs about that - I'll collect orders from everyone on the list and will announce the bulk order on the forum as soon as something is happening!**

Username	Number of PCBs
rosch	10
modularman	4
henrikgo	1
kroutshev	2
Strophlex	6
booster	2
jooks	2
kok6	2
iorobyy	2
lead bromide	2
