

# TriggerMatrix V0

yes there is a 8bit Prototype, built in a Techstar made it a TEKKSTAR, but also there it was soon replaced with a 32Bit Core,

it was a 8x8 LED-Matrix, with 2x8 Buttons, on Breadboard

a other 32bit Variante built in on the other Upper-Manual in Crumar 198, UI-controlled via a BCR2000

# TriggerMatrix V1

32 Bit PROTOTYPE

# TriggerMatrix V2

not supported anymore, it has timing issues, use the way more lightweight V3 or V4!

# What is Triggermatrix ?

a quick but not full view into triggermatrix and sequencing (german-austrian)

## Teaser

You have spend time to program a cool rythm, and you already know which chords/melodys you want to play, and now its time to programm the timing/steps/the rythm in the melody... after quite a while of trying and looking on your drumline you have a fitting melody line for your drums...

now you change the drums a bit... o no i also have to change the melody now... i make a break, a intro...oh no so much work and time...and all because, the melody is fixed in arrangement,

you want a melody line that goes with beat? you want to change the beat note stream also (noteprocessing)? > read more... i have a tool for you!!! it will change your way doing LIVE! get ready for JAM!

## Features

### Short spoken:

- 16xdrumtriggers > Trigger-Routing-Matrix > Drum-Syntesizers
- Melody-lines > Trigger-Routing-Matrix > Melody-Syntesizers

### Rules:

- Drum-Trigger are Velocity Master > we dont care about the velocity of the Melodys
- There are Songs (ProgramChange), each Song has 16 different Trigger-Routings Presets> these are the Song-Parts
- 512 Songs saved on SD-Card, and Load-able while playing
- 512 System-Settings(Setups) saved on SD-Card...i use only one of it
- Triggermatrix midi-outs are connected to all synths, so it manage the program-change also
- 16x Trigger-OUTs with fixed Notes, on one midichannel - to connect Drum-Synths, Drum-Samplers
- 6x Polyphonic Melody-Retrigger-OUTs on 6 MidiChannels - to connect MelodySynths to it
- 12x Monophonic Melody-Retrigger-OUTs on 12 MidiChannels - to connect Monophonic Synths like pitchable Drums or Bass-Synths
- All 16 Trigger & ReTrigger-OUTs share the same Routing and Channelstrip UI (Mute, Solo, Roll...)
- Trigger, Poly, Mono-OUTs can be controlled seperatly by > **Random-Kill** & **Velocity-OFFSet**
- 6x Melody-Input-Matrix - Route & Mix Melody Inputs to the 16 Melody-Retrigger-Outs (saved in Song)
- 16x Melody-Input-Matrix-Hold-Buttons - hold the last Note, save it in the Patch - usefull when pitch drums.

V1: the Matrix has also a Trigger-Sequencer built in, the Melodys have to come from anywhere else, but @ the end, they have to be plugged into the matrix...

### **Trigger-sequencer, a few facts:**

- is a Drum-Step-Sequencer
- 256 Steps in total
- minimal LoopSection is 16steps = 1 Page, there are 16 pages to chain
- intro LoopSection, from step 0 until to the "minimal LoopSection"- is played once, then it loops the normal LoopSection
- The sequencer is made to give a static NoteStream, the Song-Structure is done by the TriggerMatrix
- Full Velocity control, visible with 3 different colours, each colour-Vel is set with its own CC
- Free programmable Swing to each Step, with 2 different swing Length-sets, which are controlled live via CC
- copy, paste, erase of pages
- copy, paste, erase of rows
- forward, backward, fw><bw - play direction
- Not only 4/4 are possible, all other things like 5/4 are possible! +++

## **Generic Interface**

Generic in sense of: PCBs that already out there:

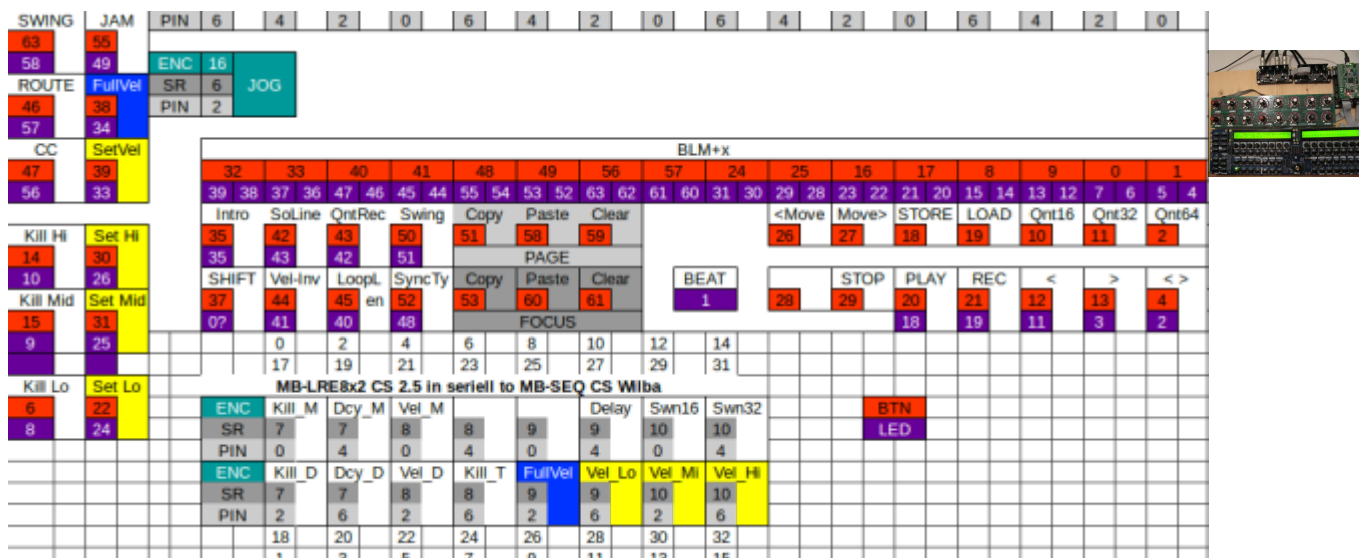

- [Wilba SEQ CS](#)
- [BLM16x16x](#)
- [LRE8x2CS\\_PCB](#)
- [CORE32 STM32F4](#)
- [2x 2x40Char Display](#)
- [2x Midi IO](#)
- SD-Card and some wires (which all are crimpable)

so when you have those things, upload [the Code](#) & watch the videos above

Serial Chain is: Wilba SEQ-CS and then LRE8x2

code is working, SEQUENCER timing is a mess, i was still a newbie in c > "learning by doing"

here is a ["FrontPanel+Pin-Out"](#) where the functions on the WILBA CS & LRE8x2 are explained

The screenshot displays the TriggerMatrix V4 software interface. It features a large grid of controls, including buttons, faders, and switches, arranged in a structured layout. The interface is divided into several sections, with labels such as SWING, JAM, PIN, ENC, SR, JOG, CC, SetVel, BLM+x, Intro, SolLine, OntRec, Swing, Copy, Paste, Clear, <Move, Move>, STORE, LOAD, Ont16, Ont32, Ont64, BEAT, STOP, PLAY, REC, <, >, <>, MB-LRE8x2 CS 2.5 in serial to MB-SEQ CS Wlba, ENC, Kill M, Dcy\_M, Vel\_M, Delay, Sw16, Sw32, BTN, LED, ENC, Kill D, Dcy\_D, Vel\_D, Kill\_T, FullVel, Vel\_Lo, Vel\_Mi, Vel\_Hi, and various PIN numbers. A small inset image in the top right corner shows the physical hardware of the TriggerMatrix V4.

## TriggerMatrix V3

### Teaser

like V2, V3 is ready for JAM.

in V2 we had a lot of UI-Elements, Menues, and Settings.

V3 is stripped down and optimized: 8 Faders, 5 Tactial Buttons, 3 Switches, 1 Encoder, + BLM16+16X. in a Way it is more like V0 Tekkstar, there we had only a matrix a view buttons and Pots... more a instrument

3/4 4/4 4/5 and other settings are Set on the 16x16 Matrix with "on matrix text".

The Timing now is rock-steady.

New is the Clip-Launcher, here we can Ableton-Style switch Clip-Variations and Songs

Now we have a Roll-Variation Fader!

## Features

### Short spoken:

- 16xdrumtriggers > Trigger-Routing-Matrix > Drum-Syntesizers
- Melody-lines > Trigger-Routing-Matrix > Melody-Syntesizers

### Rules:

- Drum-Trigger are Velocity Master > we dont care about the velocity of the Melodys
- There are Songs (ProgramChange), each Song has 8 different Trigger-Routings Presets> these are the Song-Parts
- 256 Songs saved on SD-Card, and Load-able while playing
- System-Settings, like Ports or MidiChannels are Hardcodet
- Triggermatrix midi-outs are connected to all synths, so it manage the program-change also
- 16x Trigger-OUTs with fixed Notes, on one midichannel - to connect Drum-Synths, Drum-Samplers
- 5x Polyphonic Melody-Retrigger-OUTs on 5 MidiChannels - to connect MelodySynths to it
- 11x Monophonic Melody-Retrigger-OUTs on 11 MidiChannels - to connect Monophonic Synths like pitchable Drums or Bass-Synths
- All 16 Trigger & ReTrigger-OUTs share the same Routing and Channelstrip UI (Mute, Solo, Roll...)
- Trigger, Poly, Mono-OUTs can be controlled seperatly by > **Random-Kill** & **Velocity-OFFSet**
- 6x16 Melody-Input-Matrix - Route & Mix Melody Inputs to the 16 Melody-Retrigger-Outs (saved in Song)
- 16x Melody-Input-Matrix-Hold-Buttons - hold the last Note, save it in the Patch - usefull when pitch drums.

the Matrix has also a Trigger-Sequencer built in, the Melodys have to come from anywhere else, but @ the end, they have to be plugged into the matrix...

### Trigger-sequencer, a few facts:

- is a Drum-Step-Sequencer
- 256 Steps in total
- 32 th fixed rate
- 3,4,5,7,11,13/4 tact
- minimal LoopSection is 16steps = 1 Page, there are 16 pages to chain
- intro LoopSection, from step 0 until to the "minimal LoopSection"- is played once, then it loops the normal LoopSection
- The sequencer is made to give a static NoteStream, the Song-Structure is done LIVE by the TriggerMatrix-ROUTER
- Full Velocity control, visible with 3 different colours, Velocity Set via FADER
- Free programmable Swing to each Step, with 2 different swing Length-sets, which are controlled live via CC EDIT no CC for that right now
- copy, paste, erase of pages
- copy, paste, erase of rows
- fixed forward play direction

## U Interface

PCBs that already out there:

- [BLM16x16x](#)
- [CORE32 STM32F4](#)
- [2x Midi IO](#)
- SD-Card and some wires (which all are crimpable)

so when you have those things, upload [the Code](#) & watch the videos above

Extendet UI via GPIO via J10AB, J5AB:

## Community users working on it

- [Phatline](#) = Programming, Documentation, Hardware-Prototype, Testing, Jamin...

## Getting Involved ?

Just let a Private message on the forum to user already involved
