

Fadercore

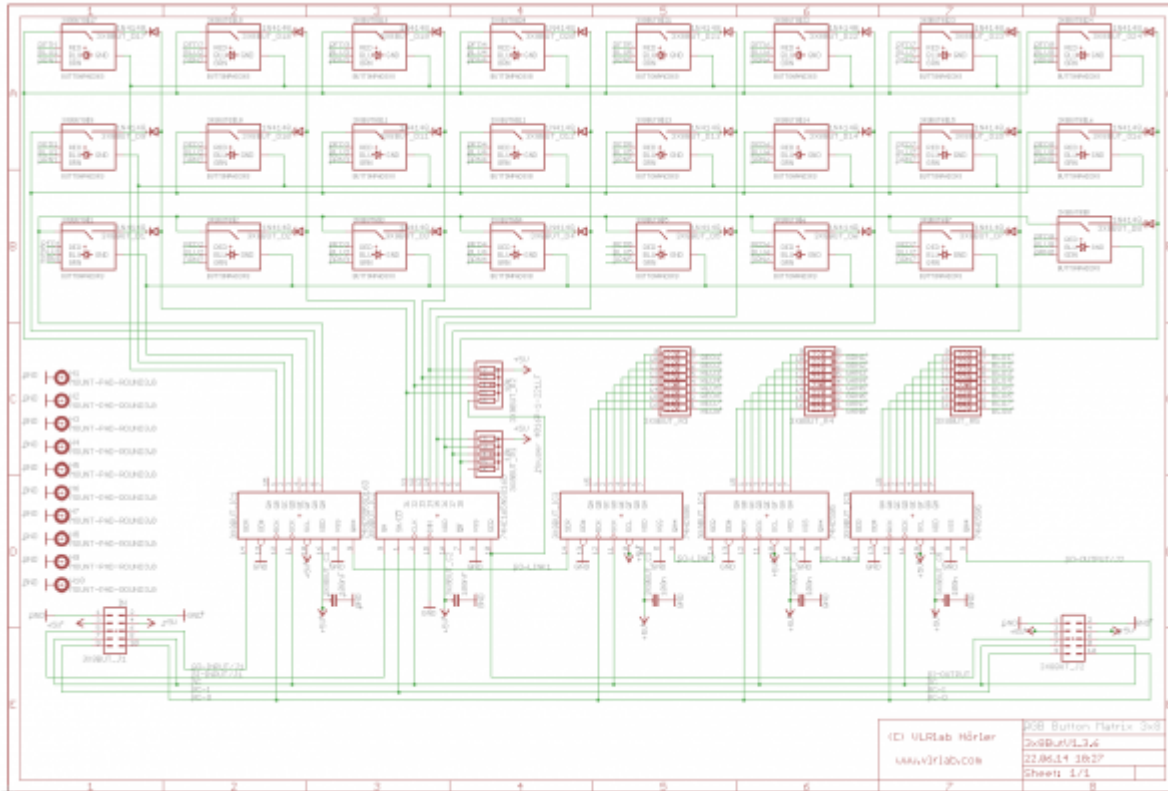

Standard 220mm wide modules

## VLR-3x8But

A PCB to add 24 Buttons with RGB LEDs for each.

### Bill of Material

Allways look for the cheapest seller, the Price may vary heavy!!! And look for Local dealers preferred.

### The Buttons

I thought a long time about how to make a Button PCB that does not explode in material cost. The best solution was to buy rubberbuttons from Sparkfun and cut them because the width of Fadercore is fixed by the minimal width of 8 Oleds side by side... 220mm in width / 8 makes a 27.5mm grid. What a pity that the Sparkfun pads are premade with a 25mm grid...

you will need two of them: <https://www.sparkfun.com/products/7835>

### The other Materials: Mouser

- 2x10pin Header, 517-30310-6002
- 5x100nF, 594-K104K15X7RF53K2
- 2x10k Network, 774-77061103P
- 3x220R Array, 652-4816P-T1LF-220
- 1x74HC165D, 771-HC165D652
- 4x74HC595D, 771-74HC595D
- 24xLED RGB, 604-WP154A4SUREQBFZW
- 24x1N4148, 512-1N4148TR

## How to get Started

If its your first SMD soldering you can follow this on t1:58 :

<http://www.youtube.com/watch?v=5uiroWBkdfY> I recommend to not buy solder paste, instead buy some flux-paste like this on Mouser: 590-8341-10ML

## Prepare the PCB

Start with the SMD parts and then go on the the conventional parts also on the Bottom side. Then go on with the Topside and the LEDs. Check the Connections with a Lens.

## Prepare the Connection

Connect the core on J8/9 to J1 of the VLR-3x8But board.

## Test it in MIOS

To make it work with MIOS .NGC File we need to know how the shift-registers are connected.

### Inputs:

1# Switch Columns 1-8

**Outputs:**

1# ROW Outputs 1-6  
2# RED LEDs 1-8  
3# GREEN LEDs 1-8  
4# BLUE LEDs 1-8

Assuming that the VLR-3x8But is the first device on the chain of J8/9 we need to configure it like this:

Im using my VLR-8oDisp board to show the Values of every item. You can change it to any other type of Display-setting... lcd\_pos=6:1:5 {6=Display number : 1= X-axis : 5= Y-Axis (row)}
