Shop around! Good local stores like [\[\[http://www.jaycar.com.au|Jaycar\]\]](http://www.jaycar.com.au) and [\[\[http://www.radioparts.com.au|Radio Parts General\]\]](http://www.radioparts.com.au) have most of the components at reasonable prices, but you can get things much cheaper from Australian electronics distributors such as [\[\[http://www.rockby.com.au|Rockby Electronics\]\]](http://www.rockby.com.au) for resistors, capacitors, sliders, pots, chips etc. and [\[\[http://www.switchesplus.com.au|Switches Plus\]\]](http://www.switchesplus.com.au) for harder-to-get things like ALPS switches, rotary encoders, sliders, pots, etc. Another retailer for PICs: [\[\[http://www.dontronics.com/cat\\_hard\\_micro\\_pic.html|Dontronics\]\]](http://www.dontronics.com/cat_hard_micro_pic.html). A great source of harder to find LCDs in Australia is [\[\[http://www.cresttech.com.au/|Crest Technologies\]\]](http://www.cresttech.com.au/). They stock PLED's as well as various Character LCDs and Graphical LCDs. They pack their products well and ship fast. Another great supplier is [\[\[http://www.aztronics.com.au|Aztronics\]\]](http://www.aztronics.com.au) who have a lot of what you may need and I think ship nation wide, they mostly stock product from [\[\[http://www.altronics.com.au/|Altronics\]\]](http://www.altronics.com.au/). Aztronics stock rotary encoders almost all the time and they are reasonably priced. ===== New Zealand ===== Andrew Gow wrote: "I managed to buy all components for your 16 pot design for about \$230 NZ, which is about the same in DM I think - not cheap but better than anything else you could buy for the same price. The problem is that everything is cheap until you try to ship it all the way to New Zealand!!! - I was quoted \$19US for 32 sliders from Song Huei in Taiwan (awesome!!!!) but \$50 US postage!!! (bummer....). Similarly, I could get a PIC for \$6 US, but add \$25 US postage and it doesn't look nearly as good. (Rest of components from Dick Smith Electronics)" \ \ //Mail by Rowan Spicer//: "During the first stages while pricing parts from various sources I discovered a very cheap (By New Zealand Standards) and helpful supplier. All of the parts for the PCB including the A 16\*2 LCD cost less than \$100 NZ (\$1 NZ = Approx \$0.50 US) I've included an invoice to show the price breakdown: [\[\[http://www.ucapps.de/mbhp/nz\\_price\\_list.pdf|NZ pricelist\]\]](http://www.ucapps.de/mbhp/nz_price_list.pdf). (Note by TK: the \*\*PIC18F452\*\* requires a \*\*10 MHz\*\* crystal!) ===== Rotary Encoders ===== \* ALPS STEC16B02/03/04 and STEC11B01/02/03/04 (detented/non-detented type) at [\[\[http://www.distrelec.com|Distrelec\]\]](http://www.distrelec.com) (Switzerland, Austria, Italia, Poland) \* 318-ENC160F-24P at [\[\[http://www.mouser.com|Mouser\]\]](http://www.mouser.com) for US \$2.59 \* [\[\[http://www.pollin.de/shop/detail.php?pg=NQ==&a=Njg2OTU3OTk=|Pollin\]\]](http://www.pollin.de/shop/detail.php?pg=NQ==&a=Njg2OTU3OTk=|Pollin), 16 detentes - nice & cheap 0,75.- Euro/Piece \* M-SW-ROT (detented type - very good quality, very fair price, fast delivery!) at [\[\[http://www.voti.nl|Voti\]\]](http://www.voti.nl) (NL) for around 1.20 Euro. Note that the pinning is the same like for ALPS STEC16B - see also [http://www.voti.nl/common/sw\\_rot\\_1\\_doc.gif](http://www.voti.nl/common/sw_rot_1_doc.gif) [\[\[make\\_encoders\\_out\\_of\\_your\\_mouse|Make encoders from an old PC mouse\]\]](#)
