A place to catalogue analogue drum experiments, clonings, mods, hacks, bends, MIDIbox integration, specialised drum sequencers, MBSEQ firmware, SID as drum machine, triggering, E-Drum heads etc etc etc.

Related pages on this wiki and ucapps.de :

MIDIBox SEQ v2 - a simple control surface can be built with 16 LEDs/switches and one encoder (according to the SEQ Drum Mode tutorial below), and still have full access to this amazing sequencer engine. Up to 48 seperate MIDI drum note assignments x 16 steps.

Can also take an AOUT module for up to four CVs outs. The DOUTx4 expansion mentioned under MIDIO128 below could possibly be coded in.

With added code, a LED matrix to display all drum patterns simultanously may also be possible, as in the Simmons SDS6. Moxi has already implemented a 4×16 button/LED matrix, and TK has indicated up 1024 may be possible (in MIOS, not necessarily in the SEQ). 4x16 LED matrix wiring - **PDF**. Also see the Sparkfun parts listed below.

MIDIO128 - up to 128 on/off signals and 128 input switches from one core. Useful for a simple fixed velocity MIDI to trigger/gate converter, sequenced from other equipment or software. A user adaption has added a DOUTx4 module for another 32 fixed velocity trigger outs.

MIDIBox CV - 8 gates and 2 analog CVs per AOUT module. Could be adapted for velocity triggers?

TR Sequencer - User project page to define and re-create the classic Roland TR-x0x drum sequencer user interface

DSEQ32 - mess's 32 step 8 track drum sequencer

MIOS Downloads - Code examples for:
* 8 CV outputs with the MBHP_AOUT module
* button matrix of 8×8 = 64
* 64 CV INs and OUTs
* 64 pots, 128 buttons, 128 LEDs
* velocity buttons (e.g. for drumpads)
* MIDIBox SID - steal matrix code
* MIDIBox SEQ

Useful Parts

RGB Matrix

Sparkfun Electronics have an 8x8 RGB LED Matrix with an SPI serial controller attached for $59.95. Red/Green version $34.95, matrix only small $4.95 large $29.95.
The serial controller backpack contains a reprogrammable AVR ATMega8 microcontroller, which bumps up the value equation and opens a world of possibilities, such as LED sensors.

4×4 lighted key matrix

According to this forum thread, Sparkfun will also soon be offering “silicone illuminated buttons … 4×4 arrays that will cost between $20 and $30 U.S … with 5mm holes for our tri-color LEDs.”

High power shift register

Shift register 8 bit high power - serial in, 8 pins out at up to 50V/150mA each. $1.95. Sparkfun again :)
This would be handy for triggering modules that expect more than +5V as from a DOUT.

Schematics:

S-Trig to V-Trig converter - also see below. 505/707 internal triggers are S-Trig.

V-Trig to S-Trig converter - different one below
Arista Drum machine
SynthOllie's scans - Boss PC-2 Percussion with noise generator mod, Boss handclap, Casio VL-1, clap, synbal, synclap, syntom II.
Matrixsynth blog entry - where I got the link to synthollie and also a SynTom II and Cymbal II Zip file.
Papareil Synth Labs - Coron Drum Synth clone schematics, also lots of other FX and synth modules, MIDI projects, etc.

Roland TR-505 8x trigger out mod

```
R80 - Kick
R75 - Snare
R2  - Clap/Rim
R69 - Cowbell
R68 - Conga
R63 - Hats
R62 - Ride/Crash
R60 - Toms
```

S-Trig to V-Trig converter

```
This will produce a voltage
trigger in response to an
s-trigger out.  The trigger                Off
voltage will be 0 or 9 volts.            ___o       ___________
Close the switch to use, open           /           | 9-volt    |
it to save the battery life.     |-----o    o---- +| battery   |-- ground

    _____     in                 |
2    |                          |
      |                         ---
      |                  ground  -
      ---  ground
```

V-Trig to S-Trig (another)

```
The circuit that I have is very simple. One VMOS FET (something like the
VN10KM). No power, nothing...

it's something like:
```

```
                      S|-----------------o S-Trig
                       ---
                    G |   |
       trig o---------|   |
                      |___|
 V-Trig.                | D
                        |
        gnd o-------------------------------o gnd

where G, S, and D stand for Gate, Source and Drain - and I may have them
mixed up, coz I'm doing this from a bad memory)
```

To do:

* MBFM drums (duh)
* Jamaroonies
* 505/707 as trigger source
* LED matrix
