

Envelope Follower

based on Harry Bissel
a SMD Variant, ready for Pick and Place

-shown 2 identical boards on one pcb - to save money..

Features

- * audio in * Envelope out * Gate out + Gate Threshold-Poti
- * Full-wave rectifier
- * 3 identical Peakdetectors which are Reseted from a "stepper"
- * a Oscillator with tunable Frequency to drive the stepper
- * Smoothingcap set via Jumper
- * Debugging Jumpers
- * PTC and Diode Polarity Protection on the Supply-side

Hardware Requirements

- This Device i build as input module for my [CV1](#) Project, but can be used for other things too
- Soldering Iron - with a Dip that can Handle SMD-Parts, Wires, solder Paste...
- Eurorack Power Source +-12V!

Building

The Design is optimized for Pick and Place most SMD Parts are on the Top-PCB

i ordered 5 PCBs from JLCPCB with almost all SMD Parts presoldered(except 2 SOIC chips PTC and Protection Diode)

now waiting for Presoldered PCBs

Frontpanel

 **Fix Me!** - Eurorack Alu-Plate

BOM LCSC

these are the parts which are presoldered by the Pick and Place Machine, these are “Basic” Parts the values with a “x” in it, like Dx1 — are because there are 2 Identical Parts on 1 PCB, because there 2PCBs on 1PCB.... so Dx1 is the same like D1, but its position is on the second board.

when making 10Boards...a total of **42,44€** presoldered on the PCBsincl Shipping and Import-Taxes

BOM Mouser

These are the parts which has to be handsoldered

[copy list below](#), and paste in this link, you will need to order the project 2 times since 2PCBs are on 1PCB

for prototyping i ordered:

490-SJ1-3535NG-GR instead of **490-SJ1-3535NG** because it is out of stock - so **GREEN sockets** for now!

when making 10PCBs this make a total of **69,83€** incl Shipping/VAT which is free above 50€!

There are 2 SOICs that have to get Handsoldered, i have done this before and its easy!

the actual Picture is this

Overall Material Costs

PCB:**42,44€** + MouserParts: **69,83** = 111,46€ / **10** PCBs = **11,14€ a PCB**
(where half off work is done by pick and place machine!)

Schematic

To Do

- experiment with the Smoothing CAP, i already implimented a Jumper which add a second Capacitor to "double" the capacity... i took 220+220nF, but maybe it is better to use 100+220nF?
 - experiment with the Frequency Pot which is a lin10K + 2K Serial Resistor which gives a range of 2K-12K - really dont know what value spectrum we need here!
 - adding some Jumpers to break the circuit for debugging or measurement
- frontplate, Debugging First Version

In order to Debug and Test and finetune the board i placed some **Headers/Jumpers:**

I have ProtoBoards here - i test one, and if it works, i can share them for Beta Testing-if you pay the postage
