

This page lists the know errors on the gm5x5x5 PCBs.

## Prototype Run

### #1 MIDI IO pins

**Problem:** The MIDI IO pins of the midi sockets (Pin 4 + 5) are switched.

**Solution:** Either (1) use the pin-headers if you use sockets that are not mounted on the pcb or (2) break the traces to pins 4 + 5 of the sockets and solder wires to them or (3) solder the midi sockets on the other side of the pcb.

### #2 MISSING TRACK

**Problem:** A track between D2 and R3 is missing.

**Solution:** Bridge the pins.
