

MIOS

Overview

MIOS is the Operating System of the Chip. This Page covers MIOS and the BOOTLOADER (or Bootstrap Loader). General Informations can be found in the Intro-Article: [what is a MIDibox](#).

There are two versions of MIOS: The (older) **MIOS8**, used for MBHP_Core modules equipped with 8bit PIC uControllers and **MIOS32** used for the Core32 modules with 32bit STM controllers. If you are planning to build a new MidiBox, you should use the newer Core32 that allows much more complex devices.

MIOS8

MIOS8 is used for MBHP_Core modules equipped with PIC18F452, PIC18F4620 or PIC18F4685.

Frequently Asked Questions

[MIOS FAQ - Questions and Answers !](#)

MIOS32

MIOS32 is used on Core32 boards, equipped with the 32bit STM32F103RE processor. MIOS32 is prepared for other 32bit uCs as well and allows platform independent applications.
