MIOS Studio was started by Jason Williams in November 2003, and later taken over by Adam King. It is a Java-based, platform-independent MIDI processing environment which not only provides upload and debug functions for MIOS (MIdibox Operating System), but also general purpose MIDI features like MIDI port routing, monitoring, filtering and a virtual keyboard. It's written in a modular way and is published under the GPL so that other programmers can make their contributions.

The link to the latest beta version is published in this forum article

For those having problems running MIOS Studio in Ubuntu (Kubuntu, Ubuntu-Studio,etc) refer to this topic for help.
